Himalaya Pharma Sales Dashboard — Project Summary

Overview

This project delivers an enterprise-style Power BI dashboard designed to analyze pharmaceutical sales, product performance, regional trends, and inventory risks for Himalaya. It enables stakeholders to make data-driven decisions through interactive visual analytics.

Objective

- Monitor sales performance across regions and products
- Identify high-performing categories and growth trends
- Detect inventory risks (low stock & expiry)
- Support strategic decision-making with real-time insights

Data Model

The solution is built using a **Star Schema**:

- **Fact Table:**
  - FactSales (Revenue, Quantity, Profit)
- **Dimension Tables:**
  - DimProduct
  - DimCustomer
  - DimRegion
  - DimDate
  - DimInventory

This structure ensures optimized performance and scalable analytics.

Key Features

- 5 Interactive Dashboard Pages:
  - Executive Overview
  - Sales Analysis
  - Product Performance
  - Regional Insights
  - Inventory & Supply
- Advanced DAX Metrics:
  - YoY Growth %
  - Moving Average (3M)
  - Market Share %
  - Top N Products
  - Inventory Risk Indicators
- Data transformation using Power Query (cleaning, type handling, null processing)

Key Insights

- Chronic medicines contribute the highest revenue share
- South Asia leads in volume; Western regions show higher pricing potential
- COVID-19 increased demand for vitamins and antibiotics
- Inventory analysis highlights low-stock and near-expiry risks
- Age group 26–45 is the primary revenue driver

Tech Stack

- Power BI Desktop
- DAX (Data Analysis Expressions)
- Power Query (M Language)
- CSV Dataset
- (Optional) SQL Integration

Outcome

The dashboard provides a centralized BI solution that improves visibility into sales and operations, enabling faster and more informed business decisions.
